PastPort: Chapter Blueprint Specification

Bursa 1563: The Resonance of a Mother's Grief & The Imperial Aftermath
Designed for KÖK&KOD; Hackathon 2026 (Vak■f Kat■l■m & 42 Türkiye)

1. Executive Intent & Rigorous Historical Alignment

This design blueprint directly implements the requirements of **Hackathon Evaluation Criteria 5.1.1 (MVP Functionality)** and **5.1.3 (Data Management & Source Accuracy)**. It leverages the historical reality of the **Waqf (Foundation) system** as the fundamental narrative and mechanical scaffold, rather than a mere cosmetic backdrop.

Unlike traditional interactive fiction that permits the dynamic alteration of macro-historical consensus, PastPort institutes a *'Fixed Container, Fluid Experience'* architecture. The overarching socio-political boundaries and chronological historical endpoints are unyielding. However, the micro-narrative path—the moral costs, personal ledger states, and architectural records discovered by the modern user—evolves organically based on user agency.

2. Sourced Historical Scaffolding (1563 CE Period)

To ensure flawless compliance with academic scrutiny (specifically local jury evaluation representing the **Directorate General of Foundations**), all structural components have been realigned with verified peer-reviewed consensus (including the TDV Islamic Encyclopedia *'Murâdiye Külliyesi'* and *'Koza Han■'* entries, and the specialized architectural chronologies of Dr. Hakk■ Önkal):

- **The Chronological Anchor (1563 CE):** The narrative takes place exactly one decade after the execution of ■ehzade Mustafa (1553 CE). His mother, **Mahidevran Hatun**, is experiencing her absolute zenith of destitution in Bursa. Her historical decade-long debt to local bread/meat vendors and landlords is fully active. The spectacular Muradiye Mausoleum does not yet exist; it will only be built in 1573 CE under Sultan Selim II.
- **The Socio-Political Tension (Post-Rebellion PTSD):** Between 1555 and 1560, the Ottoman Empire faced massive existential instability from the *'Düzmece Mustafa'* (False Mustafa) insurrections. By 1563, although the active rebellions were crushed, the state apparatus remained in an extreme state of high-alert paranoia regarding any unsanctioned assembly or veneration surrounding Mustafa's temporary resting site in Bursa.

- **Spatio-Functional Infrastructure:** The spatial circulation is split between two primary loci. The **Muradiye Complex (Mosque & Imaret Soup Kitchen)** acts as the definitive local epicenter of public waqf services. The **Koza Han (Silk Market)** functions purely as a bustling secular site of trans-imperial trade, avoiding unverified historical claims regarding its direct financial yields.

3. Functional 5-Node MVP Architecture & Variable Matrix

The chart below maps the exact execution path of the MVP, breaking down the 5 exploration nodes, 3 critical narrative choices, and the dynamic variables tracked by the underlying state machine.

Node & Location	Character Roles & Tasks	Critical Choices & State Forks
Node 1: Koza Han (Silk Market) *Secular Trade*	**Attendant:** Attempting to barter a royal textile garment for food. **Manager:** Reviewing merchant lists for unsanctioned foreign currencies.	**Choice 1 (The Economic Fork):** • *Option A:* Reject Venetian merchant offer for Prince's personal poetry script. Barter clothing at low yield to meat-vendor. Effect: Imperial Suspicion remains low; Morale plummets. • *Option B:* Transcribe the first page for the Venetian for high currency. Effect: Wealth jumps; triggers downstream surveillance payload.
Node 2: Muradiye Imaret (Soup Kitchen) *Waqf Hub*	**Attendant:** Collecting basic welfare wheat grain rations. **Manager:** Conducting mandatory audits of undocumented political exiles.	**Adaptive Core Task Engine:** • *If Option B chosen in Node 1:* The system dynamically alters state difficulty. A *'High-Risk Audit Event'* is pushed to the Manager's UI, signaling illegal foreign funding. The Attendant inherits a 'Tracked' status modifier.
Node 3: Waqf Bureau (Admin Office) *Bureaucracy*	**Manager:** Facing a coordinated legal eviction petition from conservative local landlords against Mahidevran's inner circle.	**Choice 2 (The Legal Fork):** • *Option A:* Ratify eviction to demonstrate supreme loyalty to the Sublime Porte. Effect: Imperial Loyalty hits maximum; local unrest swells. • *Option B:* Exploit scholarship ambiguities on Koza Han's cross-city jurisdiction to freeze the eviction orders. Effect: Protects exiles; Manager enters high-risk category.

Node & Location	Character Roles & Tasks	Critical Choices & State Forks
Node 4: Temporary Grave (Muradiye Grounds) *The Storm Event*	**Attendant & Manager:** Meet under cover of a severe storm prior to the arrival of an Imperial High Commissioner sent to cleanse dissident documentation.	**Choice 3 (The Shared Object Loop):** • *Option A (Incineration):* Burn the true personal poetry scripts of Mustafa. Effect: Guarantees physical safety; permanently severs the private lineage of memory. • *Option B (Sacred Interment):* The Manager utilizes the sovereign religious immunity of Waqf deeds to slip the script into the mosque dead-archives.
Node 5: 1573 Epilogue (Mausoleum) *Consensus Consumed*	**Historical Macro-End:** Selim II ascends. The 10-year debt is officially paid by state vaults. The grand mausoleum is built via royal architects.	**Micro-Plot Resolution Matrix:** The player does not unlock a generic win/lose state, but rather a profound, database-driven analytical **Insight Event** that connects the historical action directly to 2026 digital heritage preservation paradigms (See Section 4).

4. Mathematical Real-Time Resolutions & Micro-Endings

To demonstrate technical competency during the live presentation session (**Technical Evaluation 5.1.2**), the final step maps the backend conditional routing into explicit **Insight Payloads** displayed to the modern user:

Ending Plot Alpha: 'The Structural Contract' (Trigger: High Imperial Loyalty / Low Morale)

The historical scene fades out on a sterile, administrative tone. The script was burned. In 2026, the PastPort application prompts the user with high-resolution archival photographs from the Vak■f Kat■l■m repository showing the official construction expense balance sheet. The narrative delivery forces a stark, profound realization: *the magnificent physical landmarks we photograph as tourists were historically paid for by the enforced erasure of human memory and personal trauma.*

Ending Plot Beta: 'The Echo Behind the Tile' (Trigger: Forged Protection State / Script Preserved)

In 1573, the aging protagonist secretly slides the forbidden poetry manuscript behind the newly installed 'Tree of Life' Iznik tile in the mausoleum's central alcove. The system executes a dramatic temporal shift to 2026: a digital X-ray scan interface reveals that during the 2020 major restoration of the Muradiye Complex, archaeologists discovered this exact manuscript hidden behind the masonry. The user realizes that their dangerous underground choices in 1563 are the sole reason why history remembers the Prince's final words today.

Ending Plot Gamma: 'The Fractured Elegy' (Trigger: High Wealth / High Surveillance Risk)

The physical tomb is erected in Bursa, but it stands completely empty of personal writings. The system interfaces with external simulated museum APIs, displaying that the first half of the script is currently located in the St. Mark's Library in Venice, while the second half rests in Bursa. The game's micro-choices elegantly explain the real-world modern phenomenon of trans-national artifact fragmentation.

5. Technical Implementation Details for Hackathon Submission

The runtime state architecture encapsulates these changes via a structured state tracking configuration. Below is a compliant schema format representing the node configuration map for Weijia's integration pipeline:

```
{
  "chapter_id": "bursa_1563",
```

```
  "target_dataset_mappings": ["TDV_Muradiye_Kulliyesi", "TDV_Koza_Han_892"],
  "state_variables": {
    "imperial_suspicion": "integer [0-100]",
    "waqf_capital_flow": "enum [STANDARD, FORGED_PROTECTION, SEIZED]",
    "private_memory_morale": "integer [0-100]"
  },
  "nodes": ["KOZA_HAN_01", "MURADIYE_IMARET_02", "WAQF_OFFICE_03", "TEMP_GRAVE_04", "EPILOGUE_15
73_05"]
}
```
