PASTPORT: BURSA CHAPTER — MISSION BLUEPRINT

KÖK&KOD; HACKATHON SUBMISSION | OFFICIAL PRODUCTION SPECIFICATION

1. EXECUTIVE INTENT & PHILOSOPHICAL FRAMEWORK

PastPort redefines historical narrative software by resolving the tension between historical immutability and interactive player agency. Under the evaluation framework of the **KÖK&KOD; Hackathon**, the design strictly rejects arbitrary fantasy revisions of history. Instead, it operates on a verified system of **Narrative Redundancy and Artifact Provenance**.

The fundamental game-loop axiom states: **Macroscopic history is an unyielding fixed container, but the micro-historical provenance—the raw human price paid to guarantee that an asset survived—is fully authored by the user.** If a player acts out of cowardice, comforming entirely to systemic or imperial pressures, the macro-historical timeline is unaffected. The historical relay baton is simply assumed to be picked up by alternative historical actors. The debts will eventually be settled, the structure built, and the poems compiled. However, your choices determine exactly **which specific modern artifact data field, physical archive index, or hidden AR registry is unlocked in 2026, and the precise emotional provenance it carries.**

2. SOURCED HISTORICAL SCAFFOLDING (1563 CE PERIOD)

To guarantee perfect compliance with the evaluators from the *Directorate General of Foundations* and *Vak■f Kat■/■m*, the micro-plots are structured around verified historical parameters mapped from the TDV Encyclopedia of Islam and specialized academic documentation by Dr. Hakk■ Önkal:

- **Temporal Positioning:** Set dynamically in **1563 CE** (one decade following Prince Mustafa's execution). This captures the peak of the post-insurrection political tension surrounding the *False Mustafa* (Düzmece Mustafa) regional uprisings.
- **The True Conflict:** Records verify that Mahidevran Hatun suffered extreme local penury in Bursa, accumulating deep debts to regional merchants (butchers and bakers) who eventually cut off all household credit line allocations.
- **Spatial Network Topography:**

  - Muradiye Külliyesi (Complex): The institutional core. Contains the active Soup Kitchen (■maret) providing welfare rations and the unadorned temporary burial shroud site of the Prince.

  - Koza Han■ (Silk Market): Serving strictly as a transactional space. Its political weight is deliberately isolated to bypass the scholarly macro-revenue disputes between Istanbul and regional foundations, operating purely as a matrix for secular trade, information broker exchanges, and pawn operations.

3. FUNCTIONAL 5-NODE ARCHITECTURE FLOWCHART & CHOICE MATRIX

This multi-column specification maps the core operational loops required for the functional MVP demo:

Node ID & Space Link	Active Character & Task	Core Decision (The Choice)	Systemic Variable Impact
Node 1: Koza Han■ *(Secular Market)*	**Attendant:** Must liquidate imperial silk garments to secure household flour.	**A:** Accept severe merchant undervaluation. **B:** Risk trading with Venetian buyer to copy first folios of forbidden manuscript for gold.	**A:** Morale -15, Suspicion 0 **B:** Morale +10, Suspicion +30 **Triggers Venice Leak**
Node 2: Muradiye ■maret *(Soup Kitchen)*	**Attendant / Manager:** Verification of ration recipients under military audit.	**Adaptive Task Engine:** If 1-B was taken, a high-suspicion flag updates state, triggering an immediate evasion mini-game.	**Success:** Suspicion -10, Funds +20 **Failure:** Suspicion +20, Lockout Branch
Node 3: Waqf Office *(Bureaucratic Bureau)*	**Waqf Manager:** Must process landlord legal demands to evict Mahidevran.	**A:** Enforce imperial eviction directive. **B:** Forge bookkeeping records by shifting the deficit into contested cross-registry accounts.	**A:** Trust -25, Imperial Power +20 **B:** Trust +30, Imperial Power -15 **Alters Ledger Data**
Node 4: Temp Tomb *(The Crisis Point)*	**Joint Scope:** Clear the location before inquisitors arrive to seize seditious texts.	**A:** Burn the raw text manuscript to guarantee absolute safety. **B:** Seal it into the building archive as an anonymous commentary text.	**A:** Morale -30, Safekeeping = False **B:** Morale +20, Safekeeping = True
Node 5: 1573 Epilogue *(The Fixed End)*	**System Termination:** Selim II budget settles liabilities. Tomb built.	**Automated Evaluation:** The background state variables compile and map into the 2026 insight interface layer.	Macro-history remains 100% sound. Personal provenance fully delivered.

4. MICRO-PLOT RESOLUTIONS (THE 2026 INSIGHT ENGINE)

- **Resolution A: The Structural Contract (The Corporate/Conformist Path)**

If the user prioritized systemic alignment and deleted the text assets, macro-history concludes predictably. In 2026, the user unlocks the standard, cold high-resolution architectural database of the foundation. The screen displays pure transaction ledger parameters (Akçe volume, structural mass). History survived, but it was fully corporate, scrubbed clean of the human actors who gave up their names to stay alive.

- **Resolution B: The Secret of the Tree of Life (The Deep Resistance Path)**

If the user executed high-risk record modifications, the building stands identically in 1573, but the Manager hid the actual poetry folios behind the central Iznik tile. In 2026, PastPort triggers an exclusive AR scan layer showing a structural anomaly discovered during the real-world 2020 digitization project. The player reads the handwritten verse, realizing their ancient micro-auditing forgery is the sole reason this piece of soul survives today.

- **Resolution C: The Fractured Elegy (The Global Diaspora Path)**

If the user allowed foreign transaction leaks to survive, the app generates a split-screen interface mirroring true international cultural division. It pairs local Bursa asset photography with *MS. Class III Code 122 from the Biblioteca Nazionale Marciana in Venice*. The ancient survival compromise directly accounts for the global fragmentation of Islamic cultural heritage.

5. TECHNICAL ARCHITECTURE DATA INGESTION SCHEMA

To satisfy the Data Utilization (5.1.3) scoring track, Weijia's state controller maps variables as follows:

```
{
  "chapter": "Bursa_1563",
  "macro_historical_anchor": { "completion_year": 1573, "source_authority": "TDV_Islam_Ansik
lopedisi_Muradiye" },
  "runtime_state_variables": {
    "imperial_suspicion_rating": "integer [0-100]",
    "waqf_capital_routing_flag": "boolean",
    "private_memory_integrity": "float [0.0-1.0]"
  },
  "adaptive_rule_engine": {
    "on_node_entry": "if suspicion > 75 then append_condition(SPY_AMBUSH_NODE_2)",
    "on_shared_object_resolution": "evaluate_provenance_chain()"
  }
}
```
